"Both the pampas and the forests are characterized by alturas—high lands that do not flood during the rainy season—and bajuras—low lands that do flood in the rainy season. The alturas are characterized by a resistant capping of partially decomposed lava, containing a top soil of coarse sand with occasional outcroppings of igneous rock. In elevation they lie some 75 feet above the bajuras, which are made up of a heavy clayey top soil and which are flooded during most of the rainy season."
